Are you interested in learning about how people interact with natural and built environments? Then this may be the course for you!

This course will explore theory and research within the field of environmental psychology – the scientific study of human-environment relations. We'll explore topics such as how individuals think about the natural environment, how physical spaces, both natural and man-made, affect our cognition and behavior, how urban-living and design influences our perceptions and behavior, whether nature has restorative benefits for our health and well-being, and how personal space, territoriality, and crowding affect how we interact with other people.

Instructor: Jonathan Amburgey, M.S., Ph.D., (ABD)
Department of Psychology
